AGRO INDUSTRIAL COMPLEX

Over the years, agriculture is one of the main drivers of growth and economic development in our region. The soil and climatic conditions of the Volgograd region make it possible to successfully conduct activities for the production of wheat, corn, cereals, oilseeds, vegetables, fruits, melons and pumpkins.

Over the past four years, agriculture in the region has achieved significant results: the region is among the ten largest Russian agricultural producers and produces superior performance from the Soviet era.

These results allow us to talk about a new responsible task: bringing the region to the top in the field of agriculture. To achieve this, it is necessary to ensure a well-coordinated interaction between government agencies, farmers, scientists and large investors.
